

Christiana River Bridge

Wilmington, DE, United States

Completed in 2020, the Christiana River Bridge provides a vital connection between Wilmington and the Riverfront, improving access and mobility within the city. Spanning approximately 500 feet, this multi-modal crossing accommodates vehicular traffic, pedestrians, and cyclists, creating a safer and more connected corridor often associated with the New Sweden Street access area.

Designed with both function and aesthetics in mind, the bridge incorporates modern infrastructure and lighting to enhance visibility, safety, and the overall user experience. Independence Lighting proudly supplied the lighting systems for the project, helping deliver a clean, contemporary nighttime appearance while meeting performance requirements for all modes of travel.
