

## Veterans Bridge

Columbia–Wrightsville, PA, United States  
Spring City Electrical

---

---

Spanning the Susquehanna River between Columbia and Wrightsville, the Veterans Bridge traces its origins to the early 1900s and remains a vital regional crossing. The bridge is distinguished by its historic importance, prominent river setting, and enduring role as both infrastructure and landmark. The rehabilitation and lighting upgrades reinforce its identity while extending its service life for future generations.

Independence Lighting supported the Veterans Bridge lighting project through design assistance, helping ensure the selected fixtures aligned with the bridge's historic character and performance goals. The project included removing existing cobra-head luminaires and replacing them with replicas of the original decorative fixtures, restoring a visual language consistent with the bridge's early-20th-century design. Through fixture coordination and technical documentation, Independence Lighting contributed to a solution that preserved heritage while enhancing the nighttime appearance.
