

Reading Hospital

West Reading, PA, United States
Spring City Electrical / LEOTEK

Independence Lighting supported a comprehensive campus-wide outdoor LED conversion at Reading Hospital, helping to modernize the facility's exterior illumination and enhance overall site performance.

The project replaced HID light fixtures with high-efficiency LED fixtures, including decorative post tops and LED shoebox fixtures, improving light quality, uniformity, and visual comfort across roadways, parking areas, pathways, and common spaces. Independence Lighting assisted with the lighting design and performed photometric calculations utilizing AGi32 to help ensure the system met performance requirements. The upgraded lighting not only elevated the campus aesthetic but also enhanced safety and visibility for patients, staff, and visitors.
