

Wyomissing Park

Reading, PA, United States
Spring City Electrical / Dimonoff

Wyomissing Park underwent a lighting upgrade designed to improve safety, efficiency, and the neighborhood's nighttime appearance. The project was completed in two sections—Circuit 1 (north of Museum Road) and Circuit 2 (south of Museum Road)—to support a streamlined installation.

Fifty LED walkway fixtures were installed, with both fixtures and poles provided by Spring City Electrical. The system incorporates Dimonoff wireless lighting controls, allowing fixtures to communicate and operate as a unified network. An astronomical time clock automates scheduling based on sunrise and sunset, eliminating the need for photocells.

Independence Lighting programmed and commissioned the Dimonoff wireless control system, ensuring reliable, seamless operation. The result is a cohesive, energy-efficient lighting environment that enhances visibility, reduces maintenance, and elevates the overall nighttime experience.
