

Trilith Guesthouse

Fayetteville, GA, United States

Located in Fayetteville, just outside Atlanta, Trilith Guesthouse is part of the Tribute Portfolio (a Marriott Brand), known for its distinctive architectural character.

Independence Lighting was engaged to develop a custom facade lighting solution that would enhance the building's exterior while delivering precise performance results. A unique challenge involved illuminating perforated metal panels, requiring careful evaluation of the material's open-area percentage and its impact on light transmission and uniformity.

Through multiple design refinements and detailed photometric modeling in AGI32, fixture placement and output were optimized to achieve balanced illumination across the facade. The result provides a clean, cohesive night-time presence that highlights the hotel's architectural form with both visual impact and technical precision.
