

## Longwood Gardens

Kennett Square, PA, United States  
Spring City Electrical

---

---

Opened to the public in 1921, Longwood Gardens is celebrated for its exceptional horticultural displays and immersive guest experiences, blending historic elegance with modern innovation.

Spring City Electrical partnered with Longwood to develop a custom path lighting assembly tailored to the site's unique needs, particularly during the renowned holiday season. The design integrates an LED luminaire with an illuminated base, delivering layered illumination that enhances pedestrian visibility while preserving the refined aesthetic of the conservatory.

A key requirement was ensuring pathway lighting during the annual Christmas event would not compete with large-scale light show installations. The custom system achieves this balance, providing safe, comfortable wayfinding while remaining visually complementary to surrounding displays.

Engineered with switchable circuits for flexible programming, the solution allows seamless transitions between events and everyday operation. The result is an integrated lighting system that supports guest safety, elevates the seasonal experience, and upholds the timeless beauty of Longwood Gardens.
