

Baer Park

Reading, PA, United States
DimOnOff / Energy Light, Inc.

Named after 19th-century railroad magnate George Baer, Baer Park is a nine-acre community destination in the 15th Ward of Reading. The park features a lighted baseball field, courts, playground, concession stand, and a historic stone field house, serving as a central gathering place for neighborhood youth and local sports organizations, including Reading School District junior high teams.

As part of a sports lighting relight project, new LED fixtures were supplied by Energy Light Inc., in partnership with Independence Lighting. The system features wireless lighting controls from DimOnOff, utilizing a cellular modem to enable remote connectivity and management.

Independence Lighting provided assistance with photometric calculations, wireless controls design, and lighting integration, helping ensure improved visibility, energy efficiency, and reliable field performance while supporting the park's continued role as a vibrant community recreation hub.
