

Independence Lighting Established 2005

Wyomissing Park

Wyomissing Park/Reading, Pennsylvania, United States | Spring City Electrical/DimOnOff

The project was broken into two geographical sections – Circuit 1 (north of Museum Road) and Circuit 2 (south of Museum Road). Despite the brutal winter, between December 2014 and February 2015, all of the underground work was done for Circuit 1. Fifty percent of this work was completed in Circuit 2 during this same time period. March 2015 saw the delivery of the new Spring City Electrical poles and LED light fixtures. New wireless control technology was also incorporated into the fixtures to allow the city to take full advantage of the LED technology. The controls utilize an astronomical time clock and allow the fixtures to communicate wirelessly with one another eliminating the need of photocells. The light standards were installed in both circuits creating a sense of place within the Wyomissing Park Areas of the City of Reading.
