

Reading Pagoda Color-Changing Illumination (2025)

Reading, PA, United States

The relighting of the Reading Pagoda enhanced the landmark's nighttime identity through a dynamic Pharos DMX lighting controls system. The installation delivers vibrant color-changing scenes, smooth fades, and precise intensity control—allowing the Pagoda to adapt visually for holidays, civic events, and seasonal programs.

Independence Lighting provided design assistance supporting the controls approach, including network design, and preparation of single-line control schematics. The team also offered guidance on decoder addressing, channel assignment, signal verification, and overall system optimization. The result is a flexible, reliable, and energy-efficient lighting solution that reinforces the Pagoda as a striking visual centerpiece on the Reading skyline.
