

Indiana University

Bloomington, IN, United States
Spring City Electrical / Dimonoff

This project at Indiana University seamlessly blends innovation with its natural surroundings, creating a welcoming environment for students and visitors set against the serene backdrop of Dunn's Woods. By pairing Spring City Electrical fixtures with Dimonoff wireless controls, the design enhances the landscape while providing flexible, customizable lighting scenes. Specialized presets, including settings designed to support stargazing at the observatory, minimize light intrusion and foster a deeper appreciation of the night sky, reinforcing the project's balance of technology, sustainability, and environmental sensitivity.
