

Center City, Philadelphia

Philadelphia, PA, United States
Spring City Electrical

The Philadelphia Streetlight Improvement Project (PSIP) represents the largest energy conservation initiative in Philadelphia's history. The project included the upgrade of more than 6,000 decorative post-top luminaires to high-efficiency Spring City Electrical LED fixtures, delivering improved light quality, enhanced energy performance, and long-term sustainability for the city's streets.

Within Center City, the implementation of the CCD light standard further reinforces the district's distinctive identity, demonstrating how thoughtfully designed lighting can both elevate functionality and help define an iconic urban environment.
