

Rittenhouse Square Park

Philadelphia, PA, United States
Spring City Electrical

Independence Lighting and Spring City Electrical played a key role in the lighting installation at Rittenhouse Square, improving safety and visibility throughout one of Philadelphia's most iconic public spaces.

One of five original squares planned by William Penn in the late 17th century, Rittenhouse Square sits at the heart of Center City's most prestigious neighborhood, surrounded by luxury residences, fine dining, and upscale retail.

The lighting enhances tree-lined pathways and gathering areas, creating a safer and more welcoming nighttime environment while preserving the park's historic charm.
